- Candy Box -LADIES SPORTS WATCH

Every Freehand-TEC timepiece is completely manufactured in the Angular Momentum ateliers piece for piece without any plans or drawings and therefore every Freehand-Tec timepiece is completely unique, a one-of-a-kind piece.

Staybrite® 1.4435 NCu represents a new alloy composition, which has been developed to meet the advanced requirements of the high-end Swiss watch industry. It is a Swiss made stainless steel and is considered the best purest steel which dominate the stainless steel world of today.

The Èmail Lumineuse is a recent development of Angular Momentum and a fusion of enamel and a non-radioactive, organic substance which is in the position to glow for many hours after being loaded under light for a period of 10 minutes. The Èmail Lumineuse used on the Dive-Tec/500 is "Aqua Blue" for the secondary information indexes and hour hand and the quick loading "Pale Green" for the primary information: indexes dive time and minute hand. The glowing capacity of the Email Lumineuse exceeds those of the the luminous substances used in Horology today by far.
