# Rebirth of the AXIS/I Navigator

After Angular Momentum was founded in 1998,  
I worked on the design of the AXIS/I Navigator Watch.

The work was completed at the end of 1999,  
production began in spring 2000, the first  
deliveries were made in mid-2001, and by the end of 2004, all  
1,000 pieces had been sold.

Since then, I have received repeated inquiries.  
While reviewing my inventory, I found some components  
that will enable me to produce a small number of  
AXIS/Navigator watches and offer them  
at the same price as 20 years ago.

CHF 1'480.- / USD 1'840.- € 1'580.-

# AXIS/I Navigator

42 stainless steel case with down-turned lugs satin finished sides and a very fine polished bezel. Single curved sapphire crystal. Black lacquered dial with applied polished steel numbers for the minutes and luminous hour markers.

Thee hour hand is a combination of a revolving hour disk (Patent CH686988) and a regular hour hand.

The disk shows the hours at 12 o'clock and could be used for showing a second time zone. Polished minute haand with luminous inlay and a polished sweep-second.

Transparent back showing the self-winding movement.

Black leather strap

exemplar, weshalb das Werkstück noch nicht dem späteren Standard entspricht.  
Dieses «Axis» genannte Sondermodell ist auf weltweit 1000 Exemplare limitiert und wird ausschließlich als Werk verkauft. Für 1150 Euro wird der Käufer automatisch Mitglied im Angular Momentum Limited Edition Club und genießt fortan einen besonderen Informations- und Kommunikationsservice – fast wie ein veritabler Firmen-Teilhaber.

### Otium (du:z): Für Feinschmecker

Um auch hier mit einer Begriffsbestimmung zu beginnen: «du:z» ist die phonetische Schreibweise des handbüchsen Zählwortes «dauze» – zwölf Stunden sind ein halber Tag, bezeichnen aber im Normalfall ein ganzes Zifferblatt. Das gilt auch für die ungewöhnliche Otium-Uhr, für die damit sind die Ähnlichkeiten mit einer konventionellen Uhr schon fast erschöpft.  
Mit etwas Phantasie kann man noch den kleinen, nur wenige Millimeter langen Finger, der in der Mitte des Zifferblatts entspringt, als Zeiger identifizieren, und wenn man das Zeigerwerk bei gezogener Krone im Schnelldurchgang bewirkt, erkennt man in ihm den Minutenzeiger. Um die Darstellung der Stunde zu veranschaulichen, aber dann

MODERN TECHNOLOGY

window in the 12 o'clock position and three subdials for 12-hour readings, 30-minute readings and the date. The Waterman Watch and the Ariki collection ranges from \$450 to \$750.

Brand new from Angular Momentum is the Dual Time model for the already established Axis line. The Axis line was designed for the fashionable traveler and a Dual Time model is the perfect addition

to such a collection. The case design is a wide circle with an almost retro feel. A subdial at 6 o'clock is large date window can be found just beneath the 12 o'clock position on the dark dial, with SuperLuminova on the indexes. Powered by the ETA 2824 automatic Swiss movement, the Axis Dual Timer is as reliable as it is attractive. The 42-mm stainless steel case is water-resistant to 100 meters with a screw-locked steel crown, screw-down back and a thick sapphire crystal. The Axis Dual Timer retails for \$1,580 on a leather strap and for \$1,880 on a stainless steel bracelet.

Whatever exciting fare the next year will bring from this young and inventive watch company, the most recent additions are enough to keep any curious consumer on time and in style.

ANGULAR MOMENTUM  
AXIS

One of my favorite pastimes is to surf the Internet looking for new and innovative watches that have yet to break onto the scene. During one of these searches, I stumbled upon an up-and-coming brand called Angular Momentum. Founded in 1999, this revolutionary company has managed to reinvent the wheel, so to speak, through not necessarily easier—way to tell time things

to the 999 members. To make things even more interesting, membership is transferable, so it is perfect as a gift or if a customer decides to sell the watch.

Where's the Beret?

This has got to be the largest looking watch I have ever worn. It is not the largest by far, but it sure appears to be. The case measures a generous 42mm in diameter and 15mm thick, but the minuscule, almost non-existent bezel makes this watch appear to be a meager 1.5mm wide, which makes it a perfect fit. You must see this one in per-

may made it quite difficult to explain it to friends, but it is well worth the effort! I have the opportunity to talk about my wife may disagree. It is all the information I could say it is too much information of its charm. The outer rim has luminova-filled hour indices and the minutes at five-minute intervals. The dial, which also features the hours. I believe the disc-

all together, but I like the Luminova so that the conventional man- glows well and lasts for as Luminova should. The crystal is impressive, but the dial from an angle. This is a nuisance at times. The tiny circular aperture. I like
